

# V-12 visor

## The different between MT-V-06 and MT-V-12:

A small disadvantage to add pinlock in a visor manufactured already is that you lose a small percentage of your field of vision. For this reason MT HELMETS developed a new visor MT-V-12 (MAXVISION)

MT-V-12 is pinlock ready max VISION, it is a special visor design to have the pinlock lens bigger than normal pinlock, it's better because the rider has a bigger field of view and it is more comfortable for riding.

The MT-V-12 visor is compatible with models that use MT-V-06 visor. This new visor has a cavity in the visor to put the pinlock lens MAXVISION inside and a new pivoting visor mechanism to separate enough distance to open the visor and the pinlock lens don't touch the shell.

If your helmet has a MT-V-06 visor and you want upgrade your helmet to MT-V-12, you only need to change the visor mechanism.

## Our V-12 visors:
